

IMPACT GSO + Challenger Rep Module

Shifting Trelegy Reps towards becoming Challenger Reps

Changing embedded habits

How Change Happens!

Instantaneous

Accumulative

Unconscious

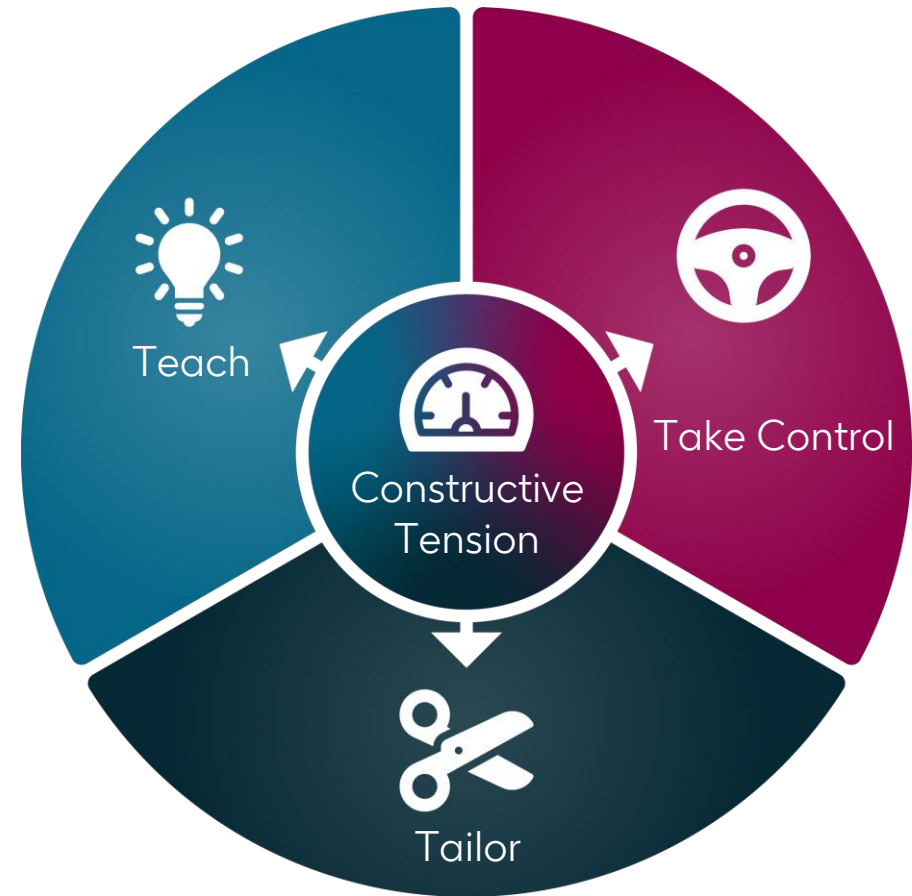

Voice of the Customer*

I value sales professionals who...

- ✓ Offer me unique, valuable perspectives on my market
- ✓ Help me avoid potential risks
- ✓ Educate me on new issues and outcomes
- ✓ Help me navigate alternatives

*Challenger Performance Optimization Inc. Research

How *Challengers* Win

Build
Constructive
Tension

**Shift behavior to compel the
customer to take action**

IMPACT Model

“By failing to prepare
you are preparing to fail.”

Benjamin Franklin

PREPARE**Understand HCP Perspective**

- Understand HCP RX Habit.
- Understand HCP Behaviour.
- Understand HCP Customers.

**Set Commercial Objective**

- Link last call.
- Identify appropriate Pt Profile.
- Competitor.
- Goals of the discussion

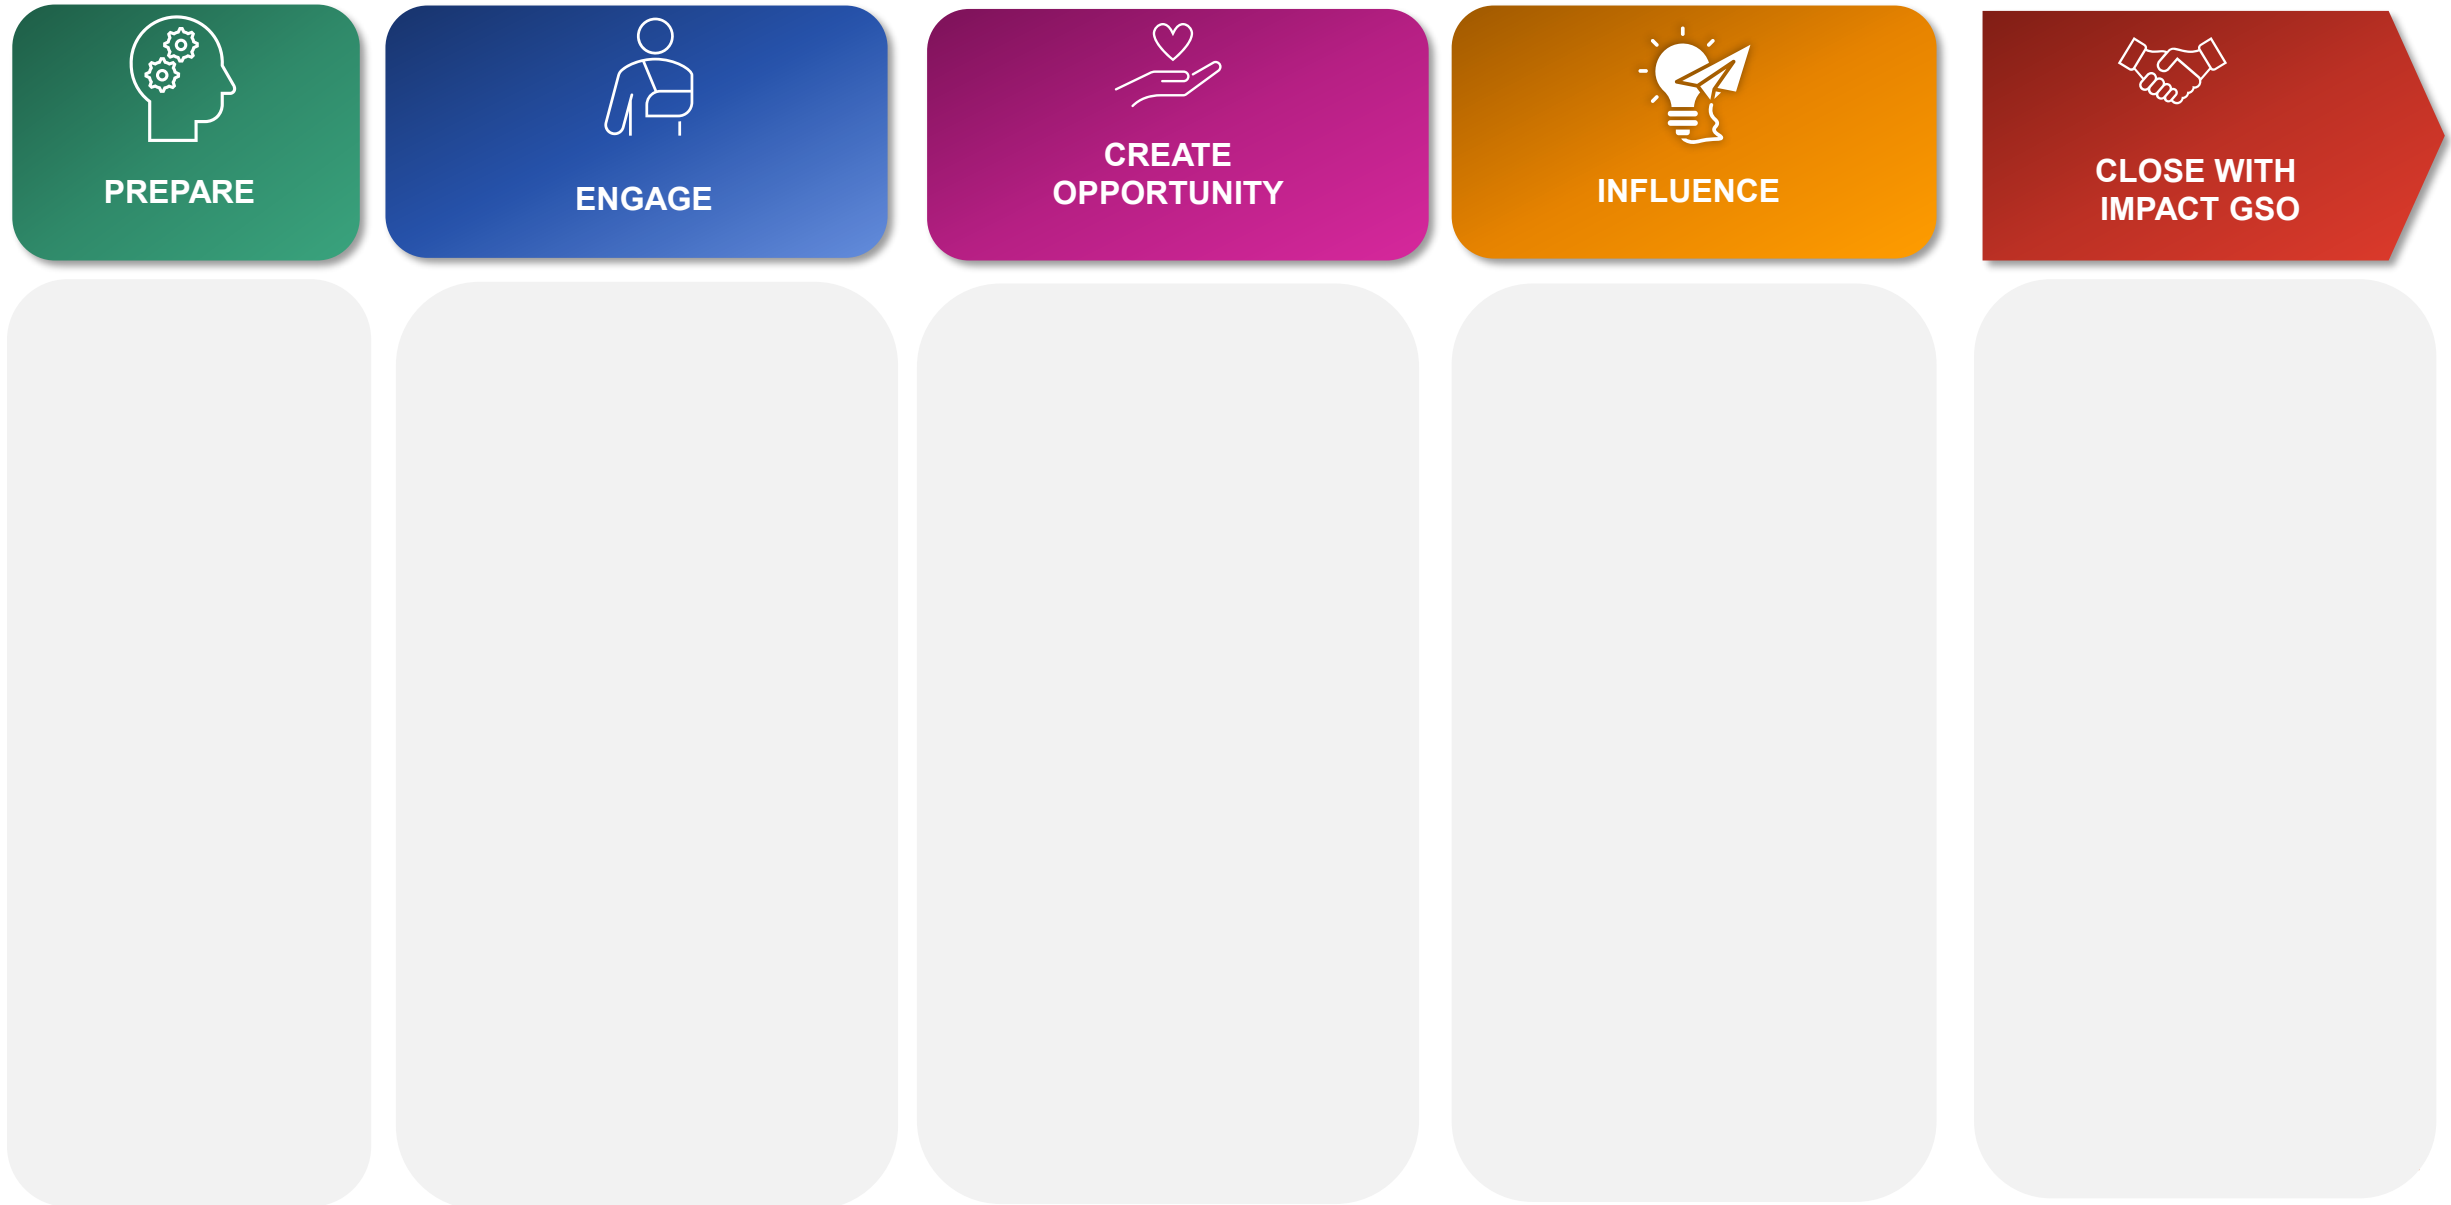

My objective is to

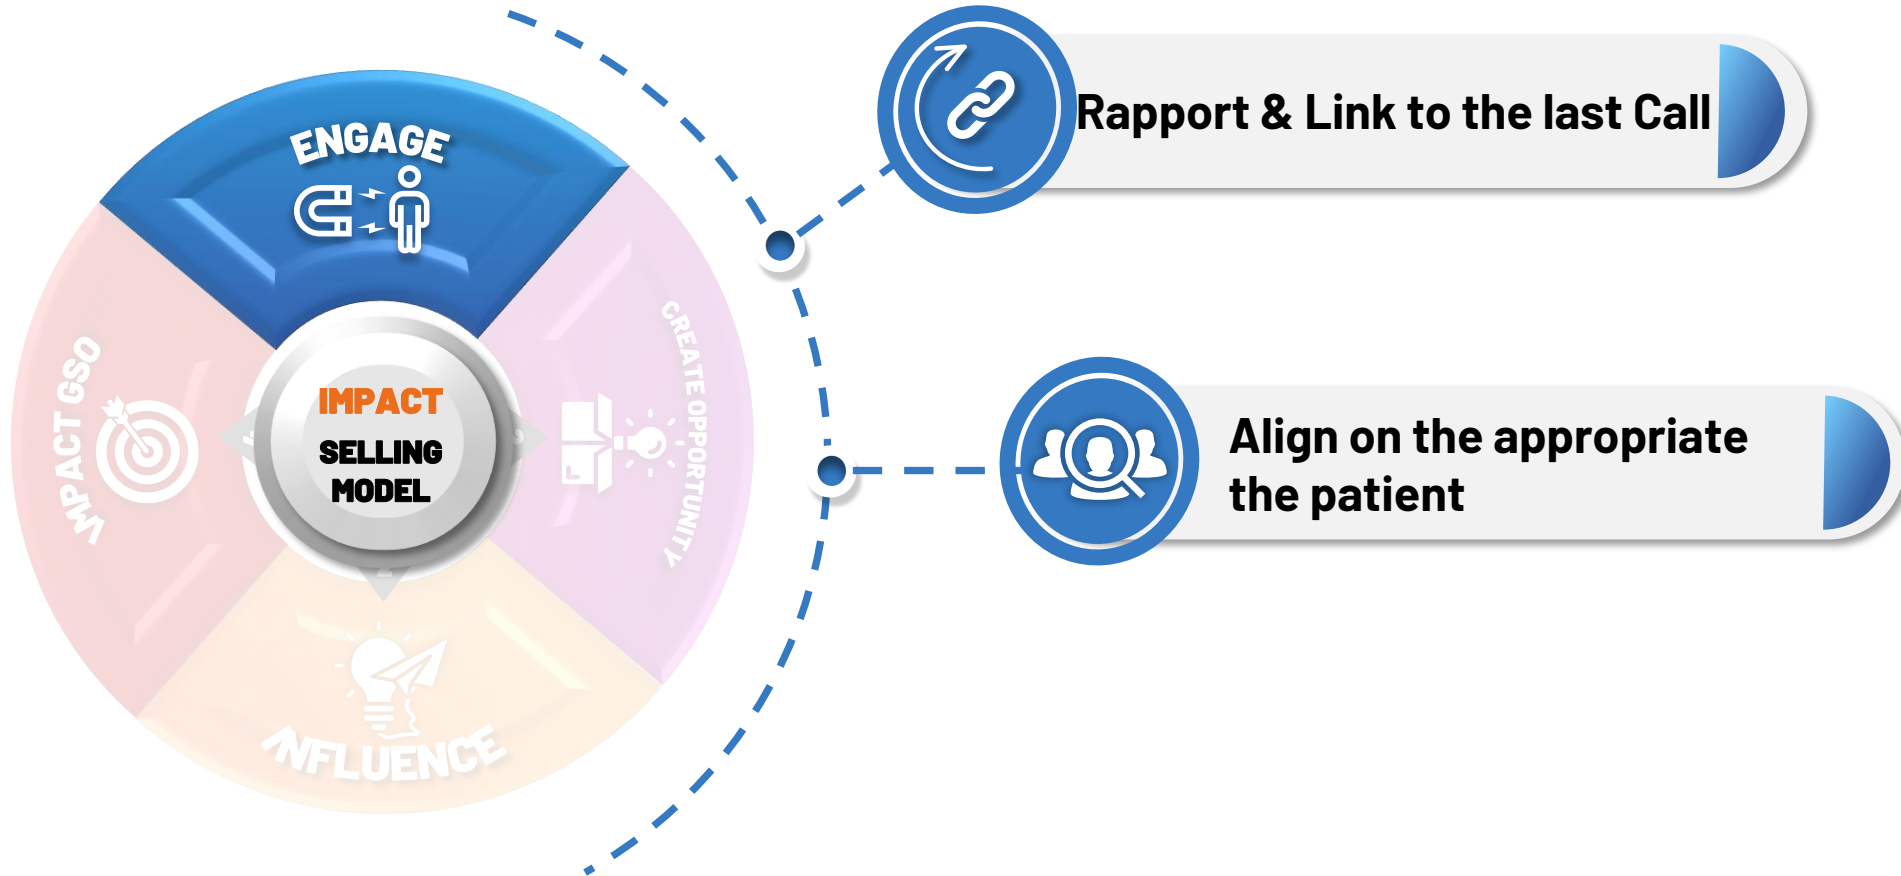

.....

.....

IMPACT Model + Challenger Rep

HCP Profile:

1

ENGAGE

Building the conversation with an outside-in perspective, starting with emotive selling for common patient profiles in mind

Results of Effective Engagement

Builds Empathy with HCPs

Helps effectively **identify the needs** of the specific patient profiles

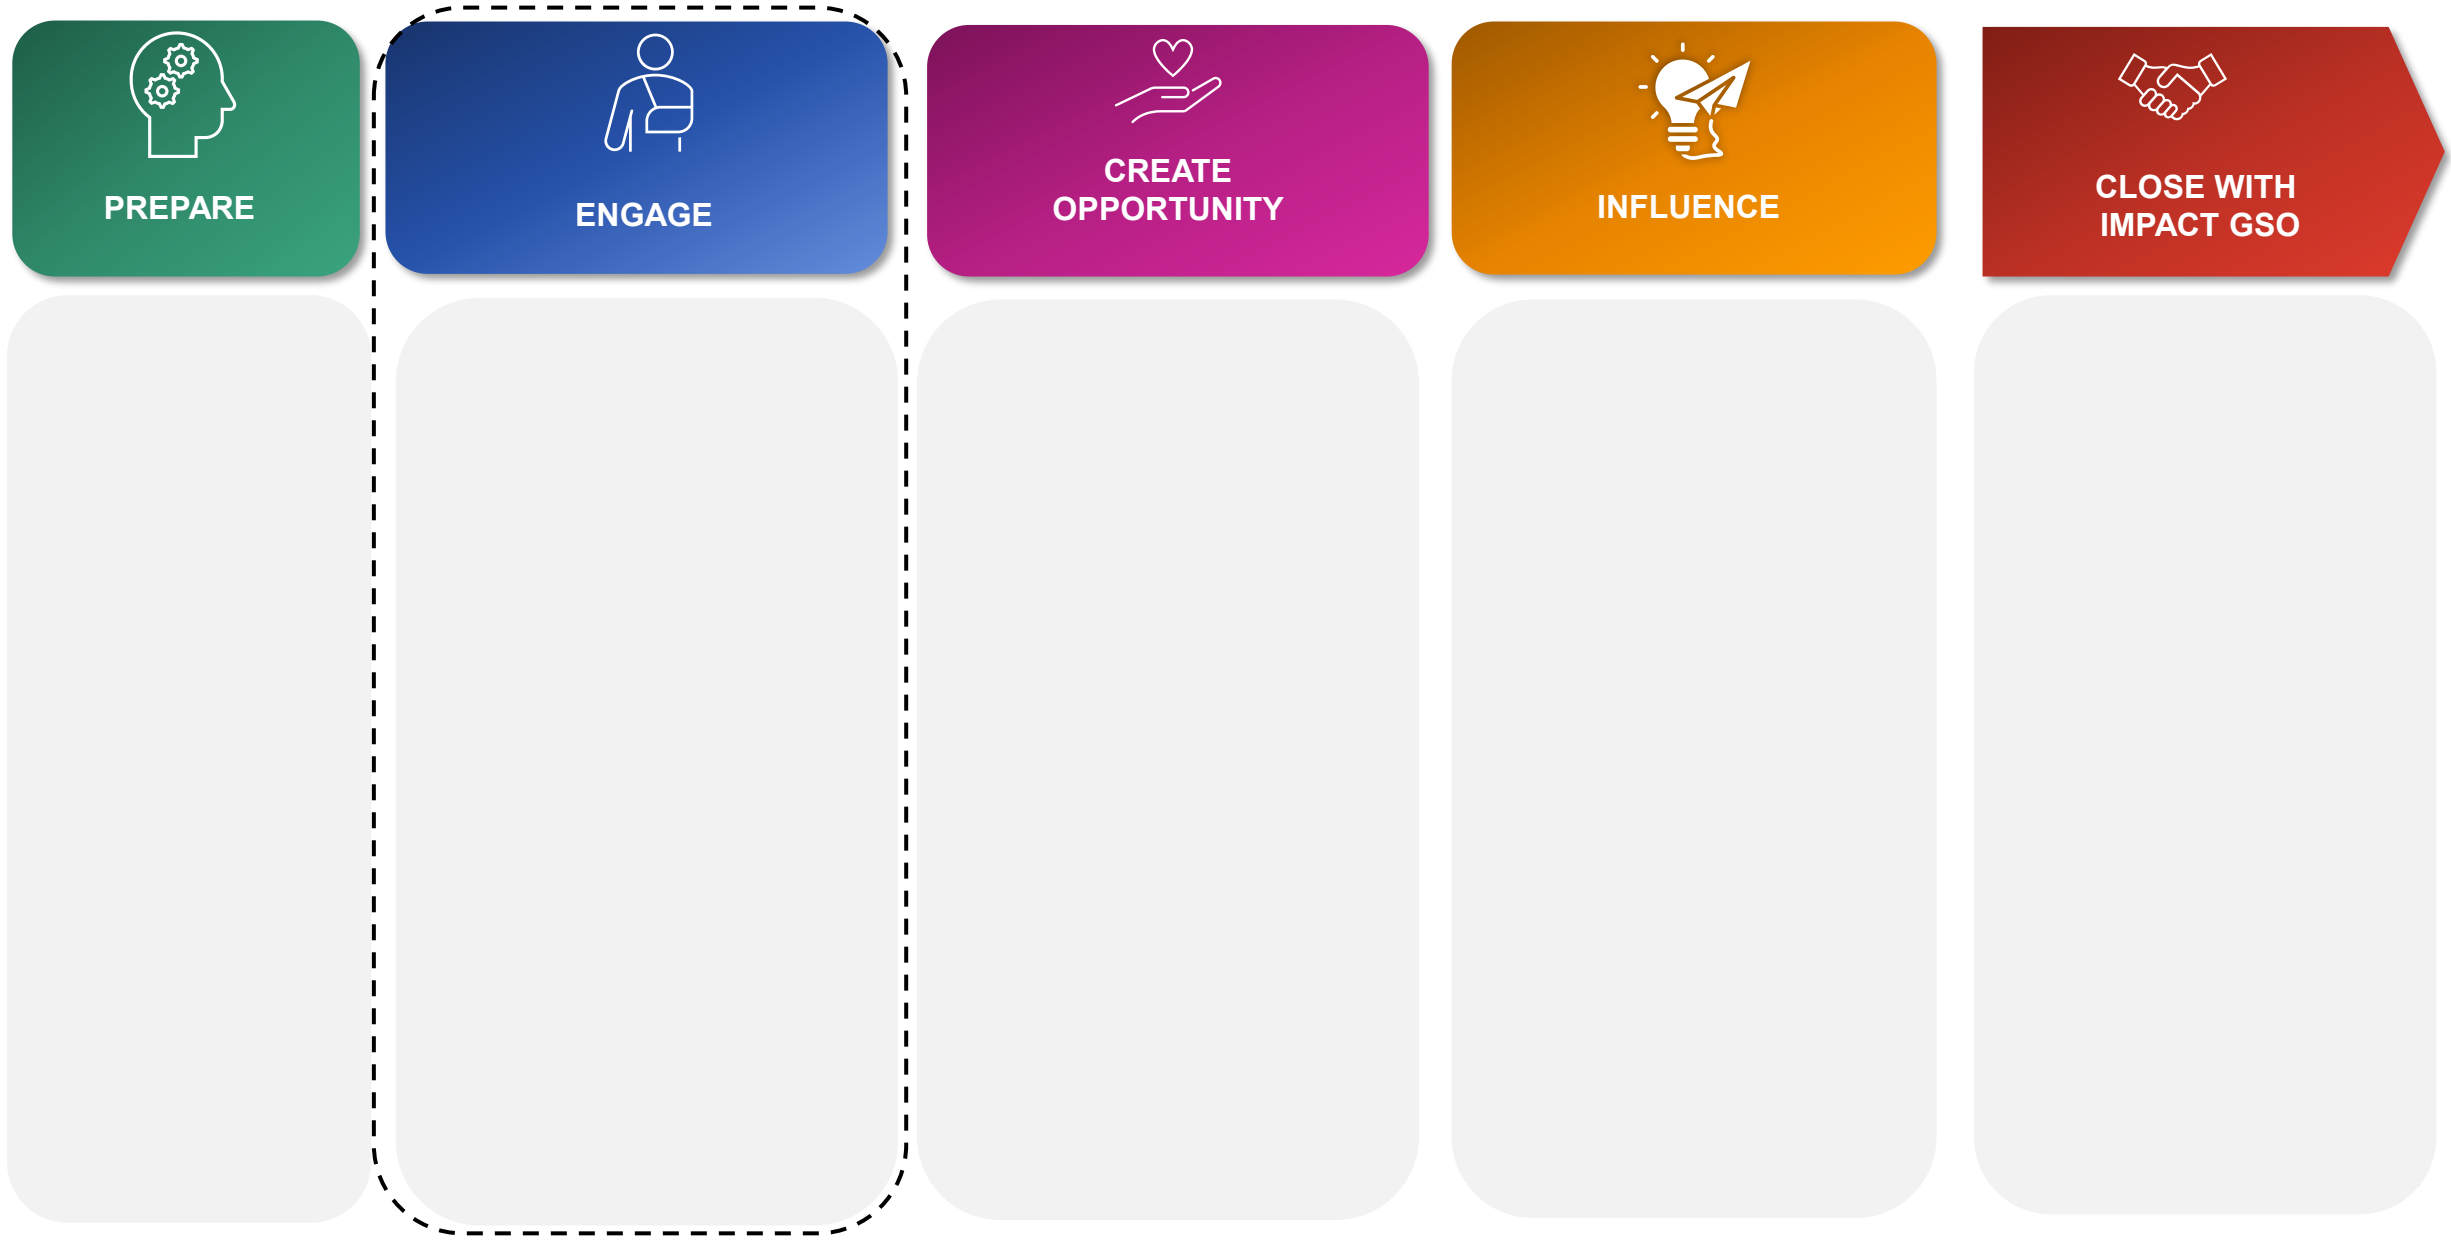

Discussions with real patient profile helps **drive relevance** in the conversation

Specific patient profiles provide an **anchor for discussions** and help streamline the flow of the call

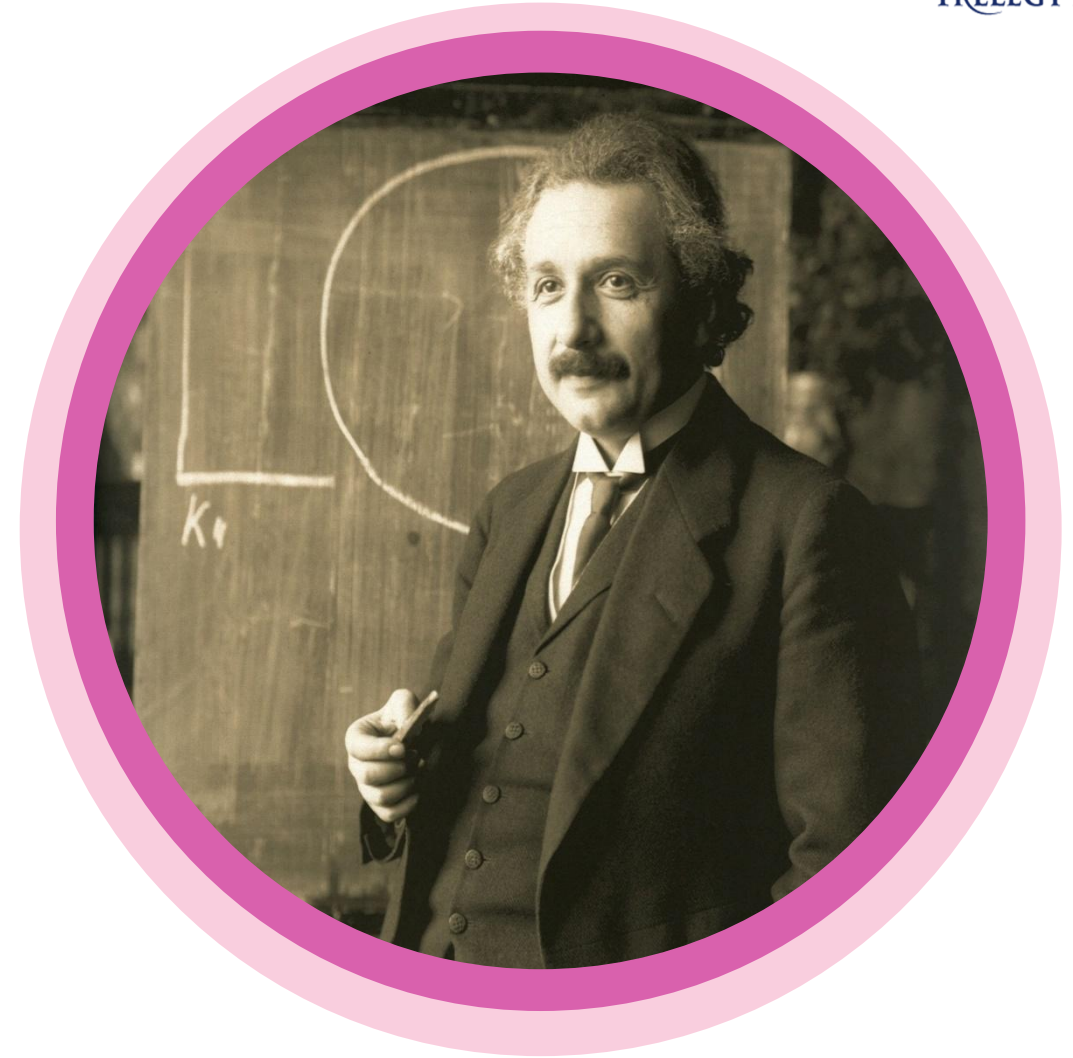

IMPACT Model

HCP Profile:

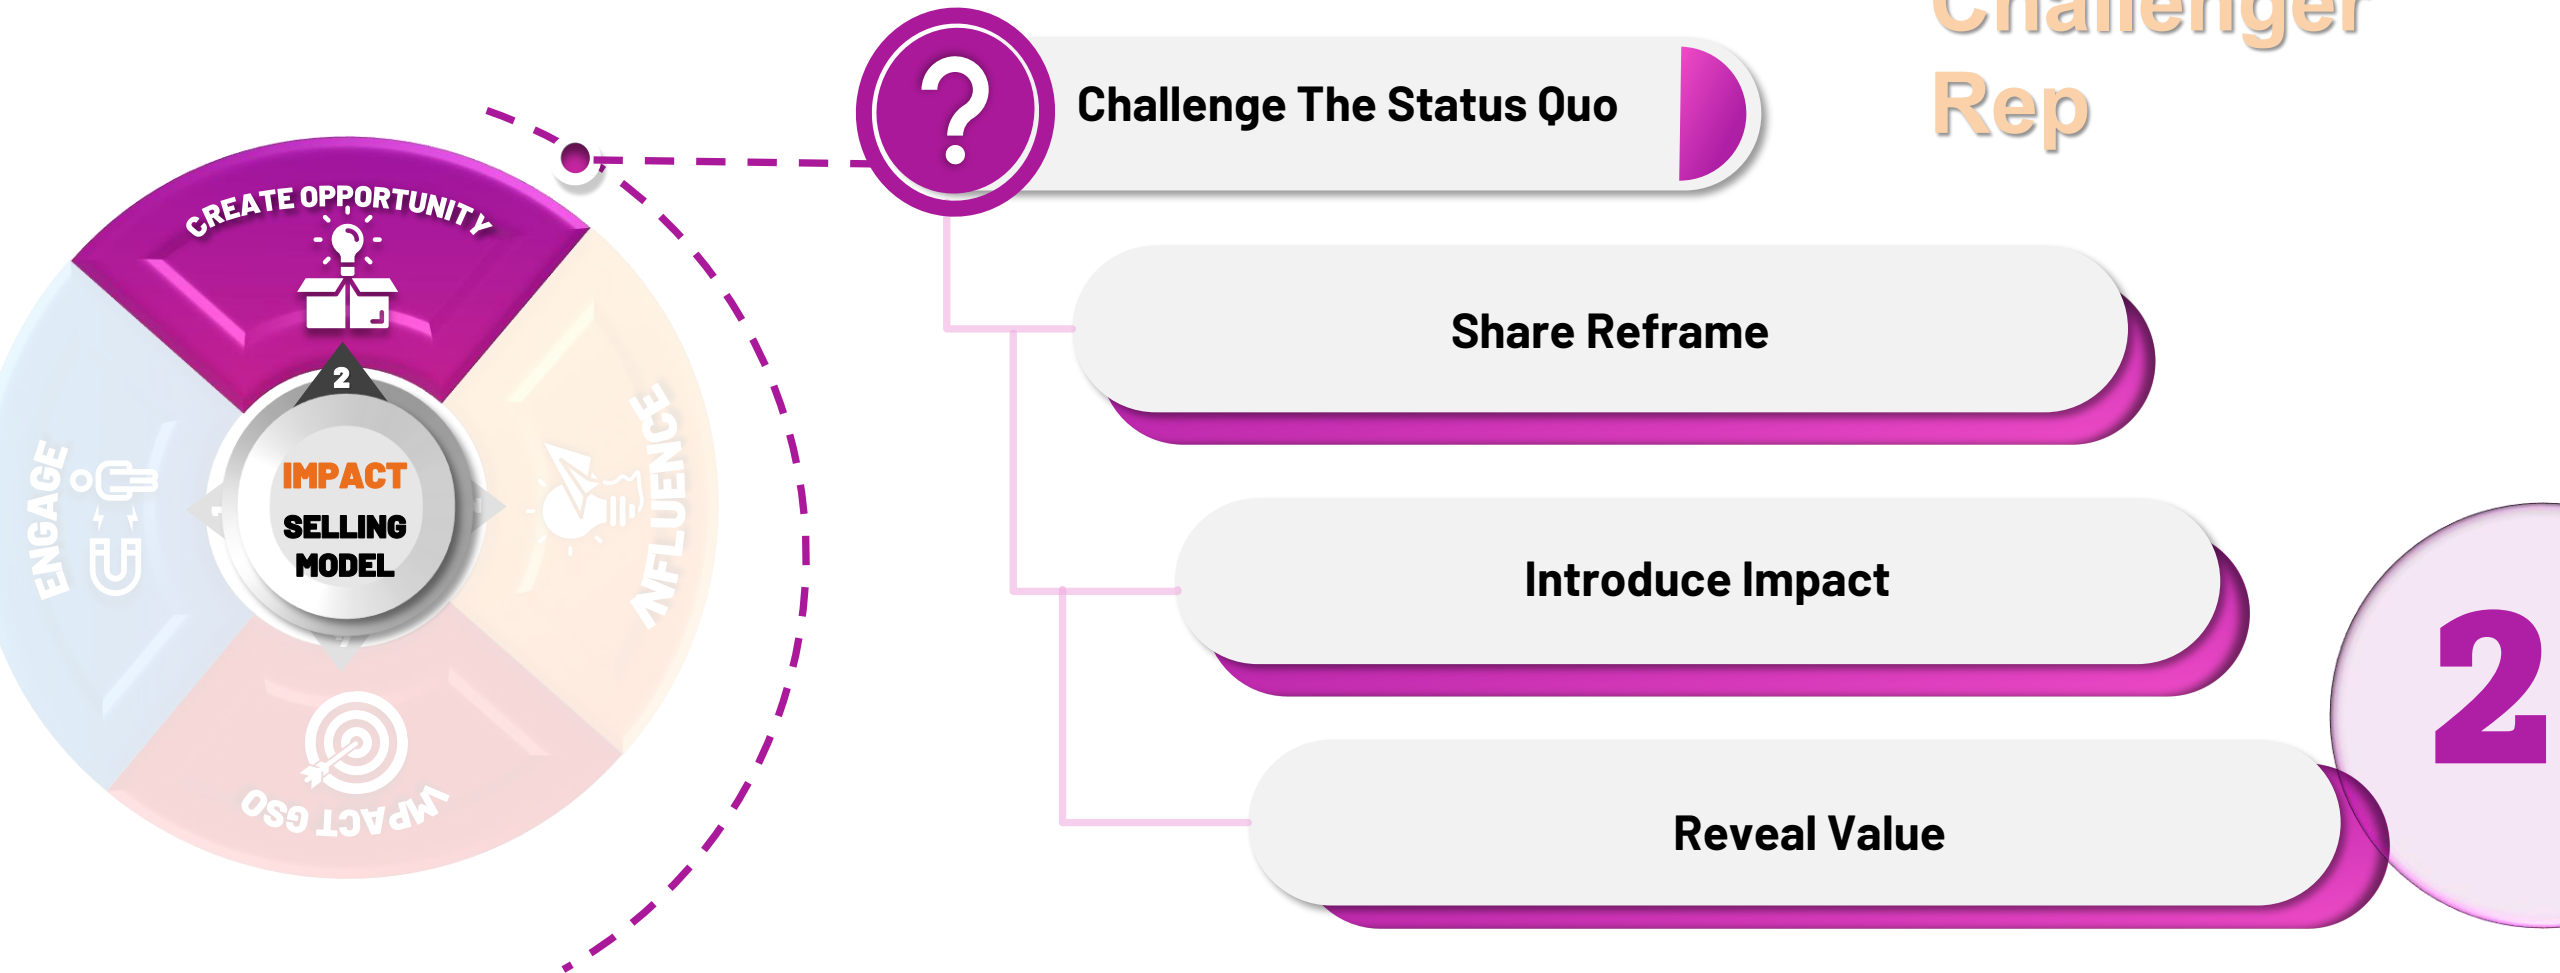

“If I had one hour to save the planet, I would spend 55 minutes defining the problem and 5 minutes resolving it.”

Albert Einstein

2

Challenge The Status Quo

Creating Constructive Tension

Constructive Tension

A productive force that moves the interaction into unfamiliar and/or uncomfortable territory where the HCP feels compelled to take clinically appropriate action

No tension

Too Much Tension

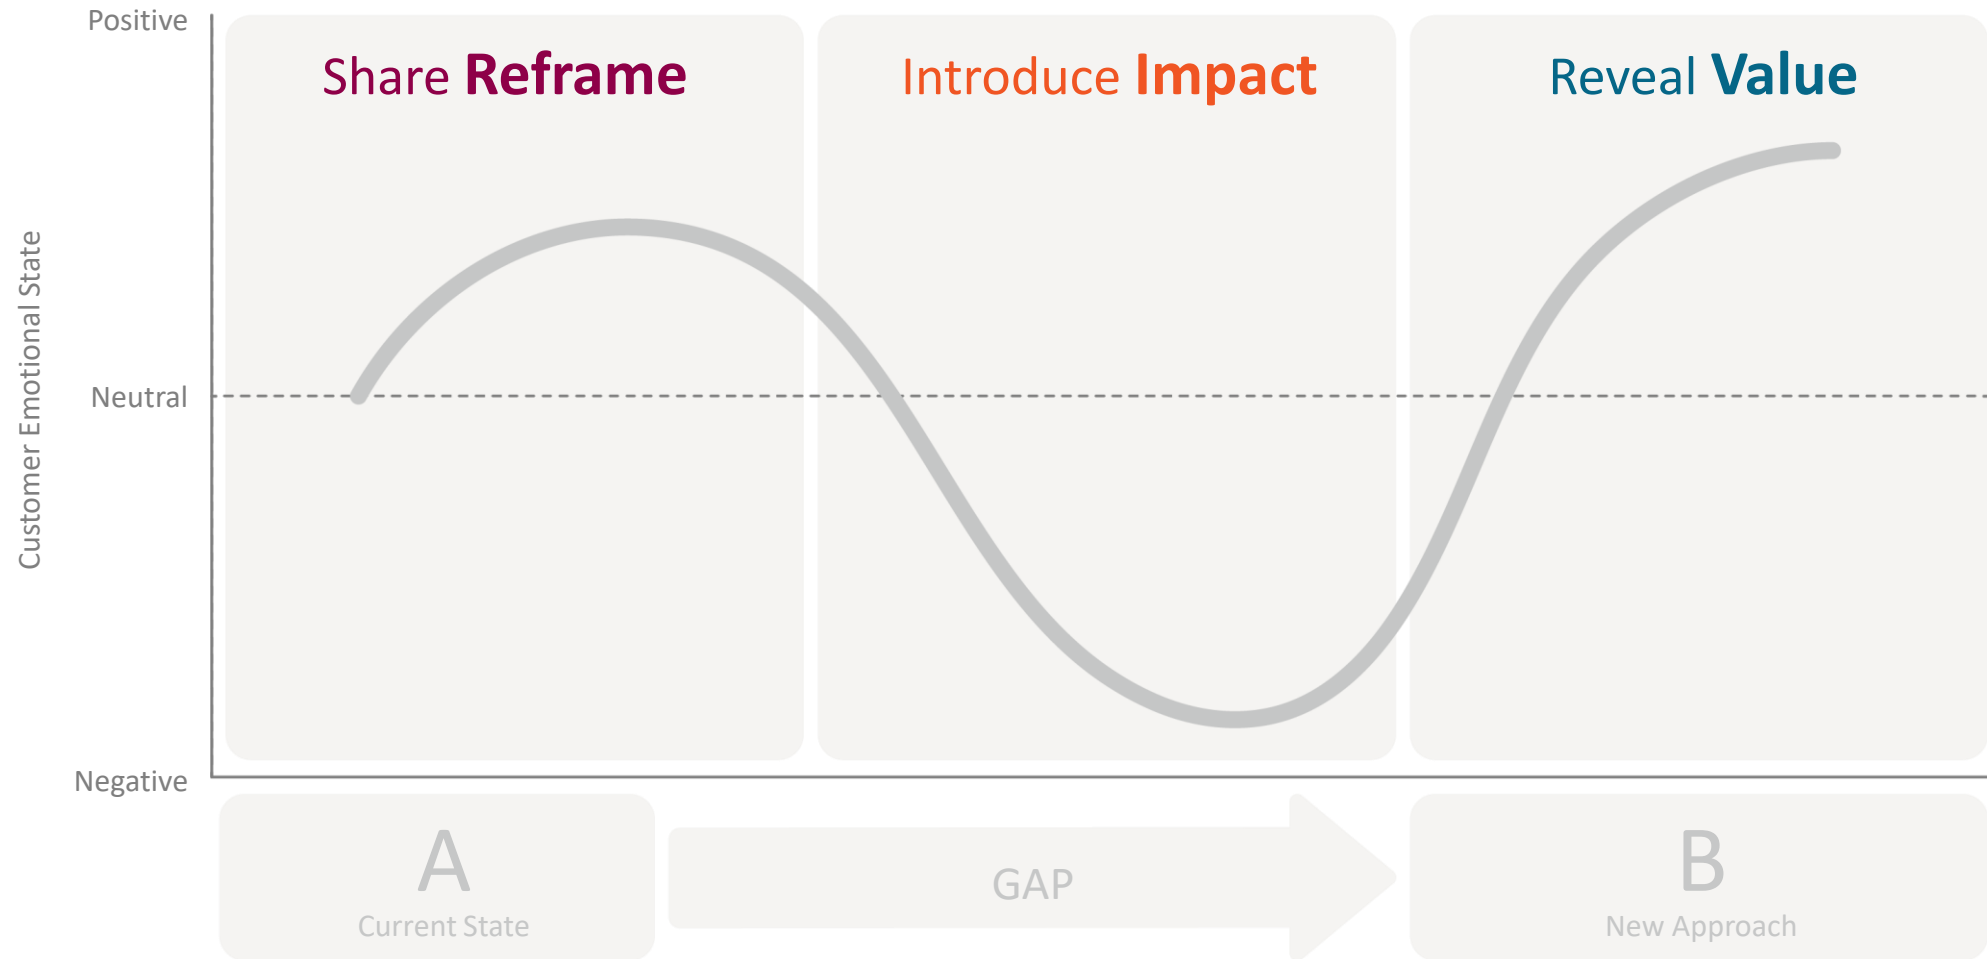

- Relaxed
- Leaning back in chair, at ease
- Nonchalant (like information is old news or the customer doesn't feel like they have a problem)
- **No need for action**

- Intrigued
- Leaning forward in chair, appears engaged
- Asking lots of questions, may even seem skeptical (because gears are turning)
- **Need for action**

- Stressed
- Arms crossed, shut down
- Sounding defensive, heightened tone of voice
- **Refuses action**, questions seller's intentions

Challenger Rep

3-Phase Message

Disrupting the Status Quo by addressing customer problem in a right way

Present an idea that **changes** how your customer views their **situation or problem**

Scripting Your Reframe

A
Current State

Captures the customer's current thinking

In your words, empathetically describe the status quo

Sample Phrasing:

- Last time we met, you explained...
- Most pulmonologists tell us they are facing challenge.....
- From our conversations with KOLs, they have shared that...
- When it comes to COPD treatment, we hear that most HCPs are challenged with...

“HOWEVER”

Signal a pivot with a strong transition word or phrase

Sample Phrasing:

- ...but.....
- ...unfortunately...
- ...the reality is...
- ...in contrast...

What the customer is missing

Reveal the flaw in that way of thinking about the issue

Sample Phrasing:

- ...this sector of patients is bigger than you think...
- ...your customers see this differently...
- ...the downstream issues are costly...
- ...this is will affect

Developing a Reframe

Activity

A

Current State

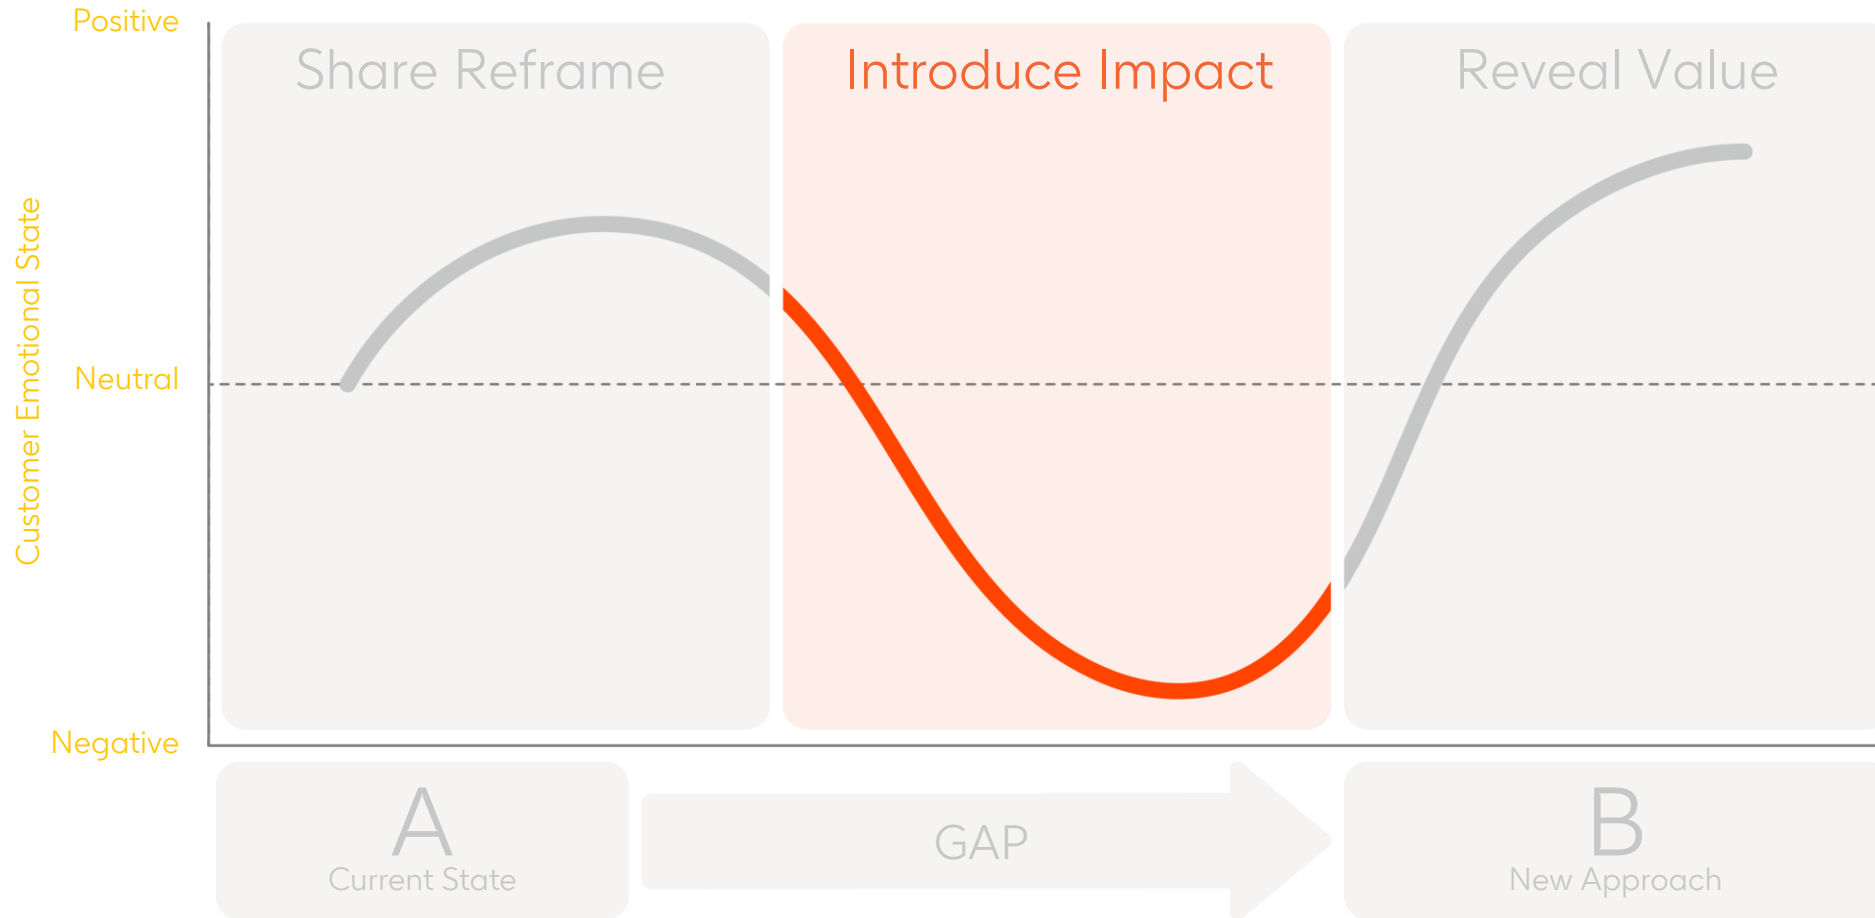

Captures the customer's
current thinking

However,

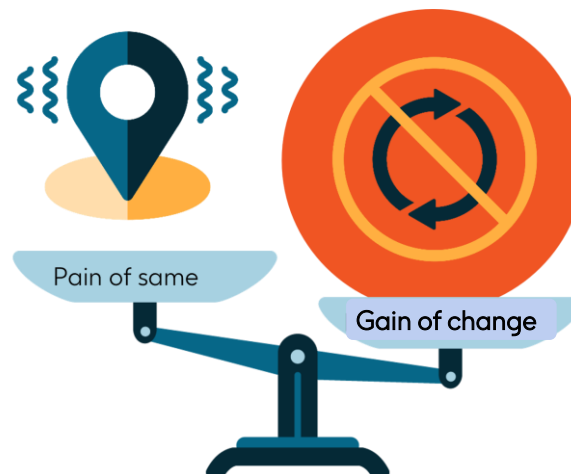

What the customer is
missing

Focusing On: Introduce Impact

Introduce Impact:
Intensify the business consequences and **humanize** the problem by articulating the **cost of staying the same.**

Introduce the Impact

Building the RATIONAL Case for Change

- ✓ Risk of Exacerbations
- ✓ All-cause mortality (ACM) risk

Building EMOTIONAL Case for Change

Emotional Impacts helps

- ✓ Tell the Story of what the 'Pain of Same' looks like
- ✓ Personalize impact by putting a human face to the problem

"People will forget what you said,
people will forget what you did,
but people will never forget how you made them feel."

Maya Angelou

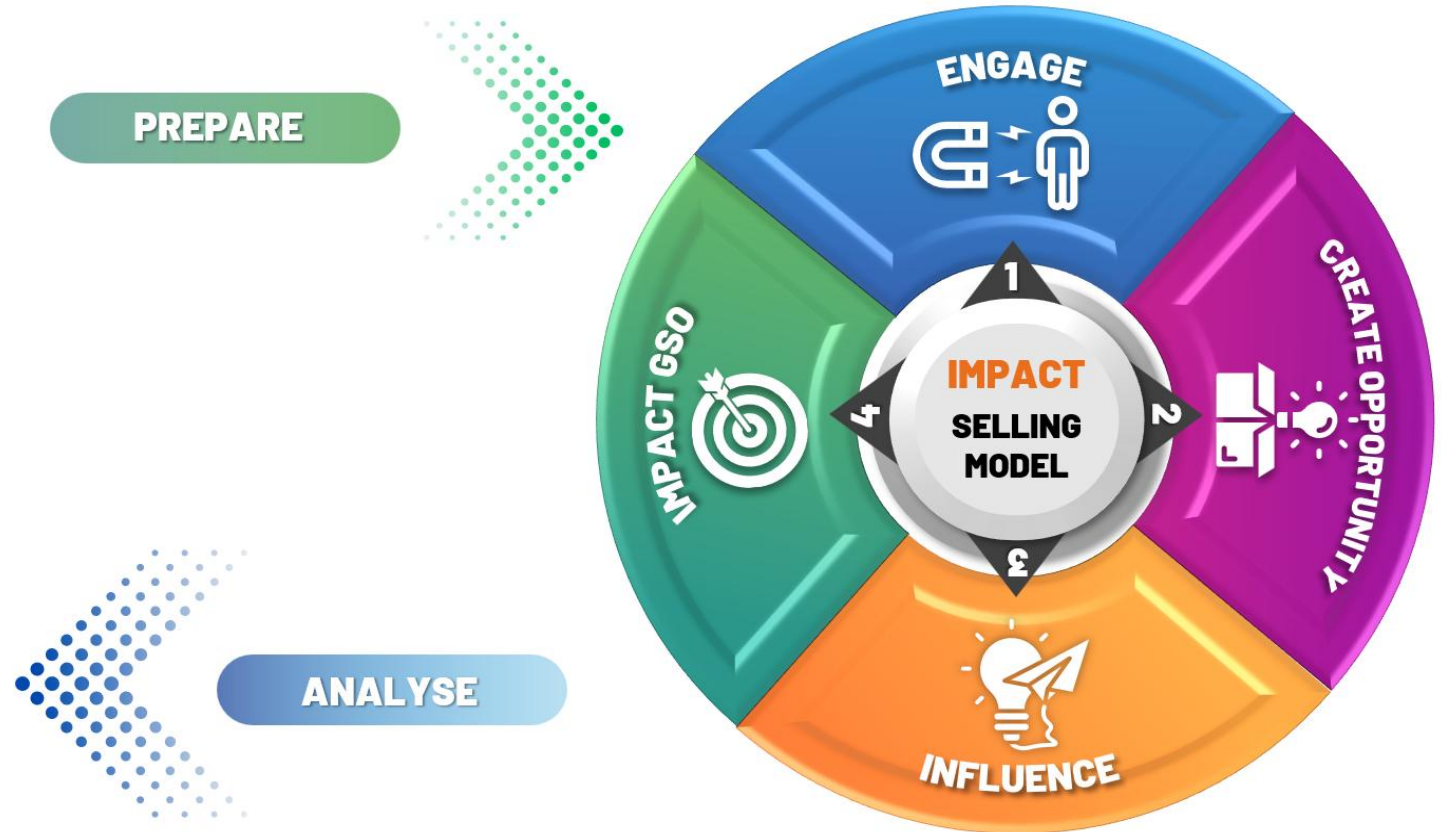

- Story Telling
- Creating Analogies such as metaphors and similes
- Using imagery
- Quotes

e.g. Age, gender, suffer, history, story, activity, affect life, hospitalization

Use emotive selling in all the steps

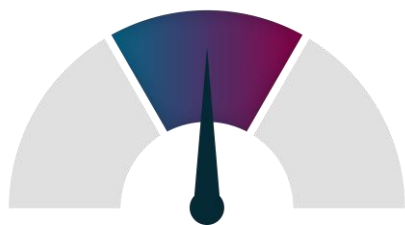

Remember Emotive Selling is your way to convince the HCP by the value you add

1. Emotive selling should be present across all 5 steps of the patient centric selling model
2. In each step, you should refer to the patient anchored on in the beginning of the call
3. If you lose the patient, value for the doctor could be lost as well.

EMOTIVE SELLING TACTICS

 Utilize emotive selling concepts to convey the emotional case for change

Dial up the Constructive Tension your story creates with:

Imagery

Incorporate details that invoke the five senses

Example: *"That's how our patients feel when they are experiencing exacerbations—like being caught underwater, desperately trying to reach the surface but held back by an invisible weight pressing down on their chest. Each inhale feels shallow and strained, as if the air they need is just out of reach. The overwhelming sense of suffocation can leave them panicked, exhausted, and unable to focus on anything else. Even simple activities, like walking across the room or climbing a few steps, can seem like insurmountable obstacles. This is the daily battle for many living with COPD, and it fuels our determination to create treatments that bring them relief and restore their ability to breathe freely."*

Analogies

Create a comparison to make your point more memorable

Example: like trying to sip air through a straw riddled with tiny holes

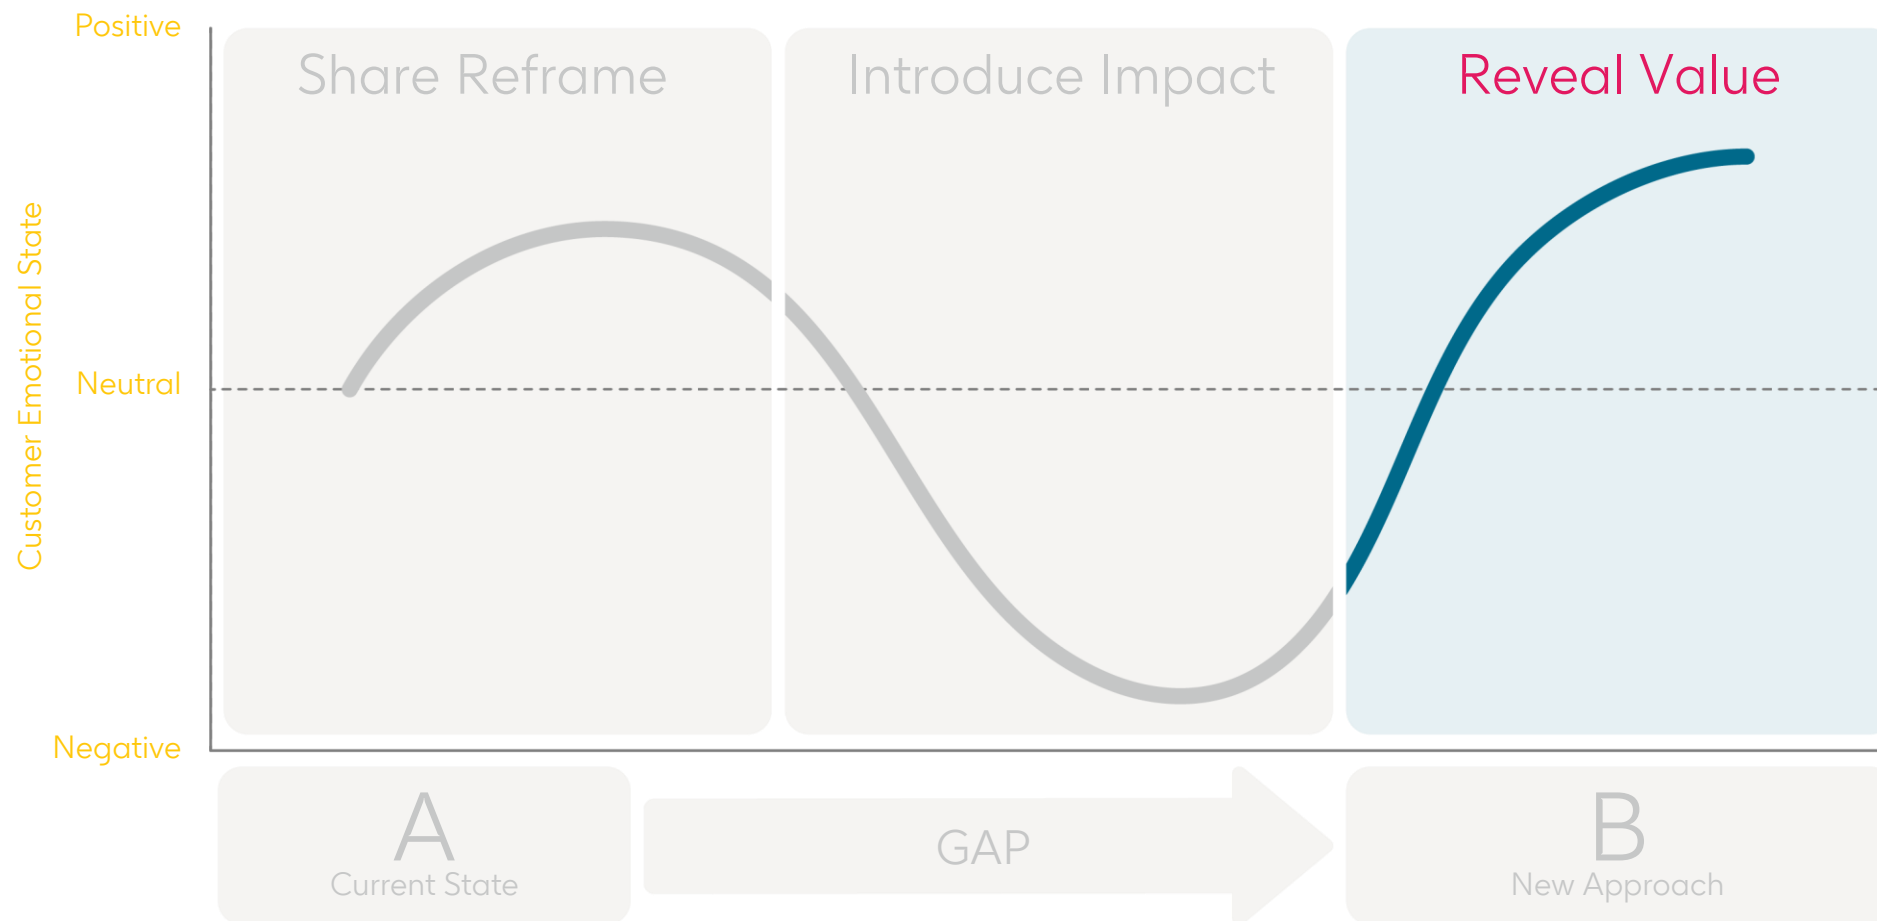

Vivid Equivalents

Connect abstract data points to a more concrete and relatable measure

Example:

- "The simple act of walking across the room feels as draining as climbing 20 flights of stairs for someone without COPD."
- "It's like carrying a 50-pound weight on your chest while trying to run a marathon. The effort to draw in air feels overwhelming, and even resting doesn't bring relief."

Focusing On: Reveal Value

Reveal Value:

Demonstrate the value of adopting a new way forward and reveal the distinctiveness of your solution.

Reveal Value of Trelegy

Offering a New Way Forward

What should your customer do differently/how should they change their behavior?

How would your customer describe the new approach in their language?

Revealing Value might sound like:

- The good news is, this is an easy fix...
- Imagine if there was a way to...
- Wouldn't it be great if you could...
- Now imagine a scenario where instead of X you...

Key Messages

- ❖ Improve Lung Function Vs ICS/LABA alone
- ❖ Achieve clinically meaningful improvements in asthma control Vs ICS/LABA alone
- ❖ Reduce exacerbation Vs ICS/LABA alone
- ❖ Best in class Molecules
- ❖ Delivered as one puff once daily in a super easy to use Ellipta device.
- ❖ Approved in Asthma and COPD
- ❖ Superior Lung Function Improvement (.....) and provide Greater Moderate/Severe Exacerbation Reduction (.....) Vs Breztri in COPD

Remember

TRELEGY OBJECTIONS

DPI vs MDI

- Breztri is in MDI form, Aerosphere.
- small particle size for more lung deposition.

Inspiratory flow Rate

Patient familiarization

Particle size, lung deposition

Onset of action

Breztri is claiming that it has fast onset of action within 5 mins.

Regime (OD vs BD)

- o Trelegy will not cover 24hrs of asthma variability with once daily.
- o More frequent administration of ICS is assuring lung protection.

ICS role in COPD

- o Adding ICS increase the risk of pneumonia for COPD Patients

TRELEGY vs Breztri in COPD

- o I do prefer to shift from Symbicort to Breztri:
 - Keeping the same ICS/LABA
 - Moving to MDI for more patient convenient/lung deposition/ease of use

TRELEGY vs Breztri in Asthma

- o I do prefer to shift from Symbicort to Breztri:
 - Keeping the same ICS/LABA
 - Moving to MDI for more patient convenient/lung deposition/ease of use

LAMA role in Asthma

- o I may consider adding LAMA after increasing ICS dose
 - I don't believe in LAMA role in Asthma.
 - SITT vs ICS/LABA in adverse event.

LAMA EFFICACY

SITT SAFETY

Price Handling

IMPACT GSO

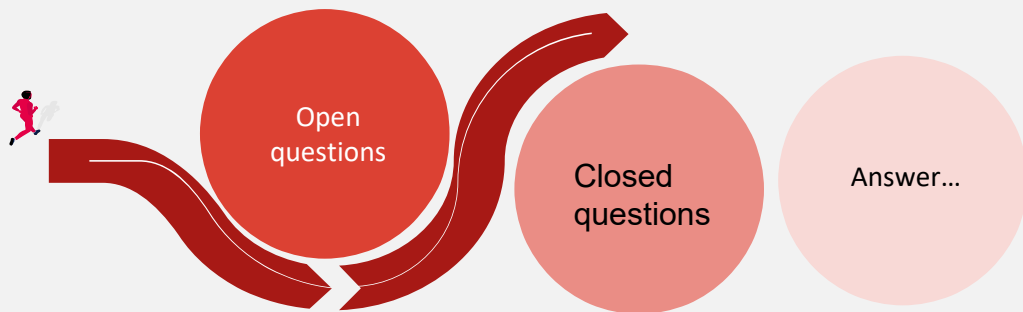

IMPACT GSO

GSK

Secure the HCP's commitment to implementing behavioral changes based on the compelling solutions discussed for the PT in focus

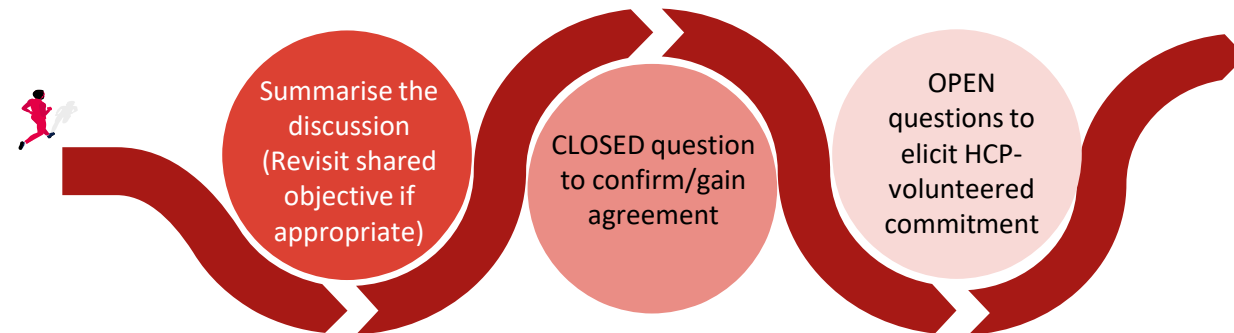

Traditional closing tactics

Traditional models typically start with open questions and lead to closed questions. Closed, decision-making questions are asked at the end of an interaction. A 'yes' answer usually results in the representative leaving

Alternative approach to getting a commitment to action

A different approach is to ask OPEN questions at the end of an interaction. This avoids the obvious 'yes' or 'no' answer from the customer and encourages actions to be volunteered by the HCP
